# GO2025®

BODYPIERCING+JEWELRY

# ÜBER UNS / ABOUT US

**GO2®** bietet, um die Kundenverbundenheit zu stärken, ein individuelles Konzept an: die **GO2® Shops**. Schauen Sie sich einige unserer Shop-Partner auf den Folgeseiten an!

Wir haben ein kundenfreundliches Preissystem konzipiert. Bei Abnahme der entsprechenden Verpackungseinheit, gewähren wir Ihnen einen **Discount von teilweise bis zu 40 %.** Diese Preise finden Sie in der Preisliste rot gedruckt.

Gerne stehen wir Ihnen 24/7 auf www.gotwo.de zur Verfügung. Wir freuen uns weiterhin auf eine gute Zusammenarbeit!

**GO2® GmbH Team**

**GO2®** created the **GO2-Shops** as an individual concept to strengthen the customer connectivity. You can find the detailed information in the pricelist. Please have a look at some of our Shop Partners on the following pages.

We have designed a customer-friendly price system. If you take a packing unit, you can get a **discount up to 40 %**.

We happily offer our service 24/7 on www.gotwo.de. We would be glad to establish and extend collaboration with you.

**GO2® GmbH Team**

## GO2® Discount System

Die Spalte **Rabatt** enthält für ausgewählte Artikel einen reduzierten Preis.

The table column **Discount** shows the discount price for selected products.

- ● Standard-Rabatte: Skonto, GO2 Clubbing, ... // Standard discounts: Cash discount, GO2 Clubbing, ...
- ●● Ausschließlich Mengenrabatt // Quantity discount only
- ●●● Std. Rabatt & Mengenrabatt // Std. Discount & Quantity discount
- – keine Rabattierung möglich // not discountable

**Mengenrabatt:** Diese Menge müssen Sie mindestens für den Mengenrabatt bestellen.

**Quantity discount**: Order this quantity to get the reduced quantity discount price.

| Seite Page | Artikel / Code | Beschreibung Description | EK Preis Price | Rabatt Discount | -Art -Type | -Menge -Qty. | UPE End customer |
|---|---|---|---|---|---|---|---|
| ... | PELB.W | Teflon Labret | 1,00 | 0,70 | ••• | 100 | ... |
| ... | PRONTOLIND SPRAY | | 2,20 | 1,95 | •• | 200 | ... |
| ... | ... | | ... | ... | • | ... | ... |

Für Details schauen Sie bitte in unsere Preisliste.
Please see our price list for detailed information.

# GO2 SHOP **UNGEZOGEN**

**GO2 Shop Ungezogen**
Schlossgasse 5 • 99423 Weimar • Germany

Unser Shop befindet sich im Zentrum der Kulturstadt Weimar. Wir haben uns auf den Piercingbereich spezialisiert und verfügen über eine mehr als 20jährige Berufserfahrung, die kontinuierlich durch Weiterbildungen aktualisiert wird.

Wir haben uns zur Aufgabe gemacht, euch eine riesige Schmuckauswahl zu bieten, damit ihr genau das passende Schmuckstück für euch findet.

Eine individuelle Beratung, sowie ausreichend Zeit und Professionalität beim Piercen sind für uns essentiell.

**WEIMAR**
**WWW.UNGEZOGEN.COM**

# GO2 SHOP **AMAZON TATTOO**

**AMAZON TATTOO OBERHAUSEN**
Saarstr. 61 • 46045 Oberhausen • Germany

Für uns, ist Euer Tattoo nicht nur reine Dienstleistung! Ausführliche Beratung, gehören selbstverständlich dazu wie eine professionelle Umsetzung, egal ob von vorhandener Vorlage oder Custom Work.

Die höchsten hygienischen Anforderungen sind selbstverständlich im Tätowierbereich, sowie im Piercingbereich grade gut genug und werden auf ihre Einhaltung, laufend vom Gesundheitsamt kontrolliert.

**OBERHAUSEN**
**WWW.AMAZONTATTOO.DE**

# GO2 SHOP **HOTSHOT-HIGHLANDER**

Seit 1994 haben wir uns ständig weiterentwickelt und mit Transparenz, Ehrgeiz und viel Energie so einige Jahre Erfahrung gesammelt. Daraus entstand mit einem tollen Team ein Studio, was täglich unseren Kunden ein Lächeln ins Gesicht zaubert.

Dass Hygiene, sterile Arbeitsabläufe, ein geschultes Team und der Wille, jeden Tag das Beste zu geben, zum Erfolg führt, zeigt unsere Geschichte. Auf ein Hotshot in die Zukunft.

**Hotshot-Highlander**
Bahnhofstraße 34 • 71332 Waiblingen • Germany

# GO2 SHOP **SKINWORKS**

**Skinworks in Köln**
Händelstr. 2–4 • 50674 Köln • Germany

## KÖLN
**WWW.SKINWORKS.DE**

**Skinworks in Bergisch Gladbach**
Hauptstraße 346a • 51465 Bergisch Gladbach • Germany

## BERGISCH GLADBACH
**WWW.SKINWORKS.DE**

Am 9. Januar 1993 wurde SkinWorks - Praxis für Körperschmuck in Köln gegründet. Seit jeher legen wir großen Wert auf umfassende Beratung und Nachsorge. Wir haben es uns zum Ziel gemacht jedem Kunden ein einzigartiges Erlebnis zu bieten. Wir scheuen uns nicht Innovationen zu etablieren. Eine kontinuierliche Weiterbildung und Schulungen in allen Bereichen sowie ein umfassendes Qualitätsmanagement um unsere Abläufe kontinuierlich zu verbessern sind wesentlicher Bestandteil unserer Motivation uns stets zu verbessern. Das wir nur unter höchsten Hygienischen Standards und größter Sorgfalt bei der Auswahl der Platzierung arbeiten versteht sich von selbst.
Wir bieten vom hochwertigen Titanschmuck bis hin zu Premium Goldschmuck alles was das Herz begehrt.

# GO2 SHOP LINES & DOTS

HAMBURG

**Lines & Dots**
Holstenstr. 194C • 22765 Hamburg
Germany

**WWW.LINES-AND-DOTS.COM**

Tattoo. Piercing. Bodymodification. Wir leben und lieben die Kunst, eure Körper zu verändern.

Seit mehr als 13 Jahren sind wir für euch tätig. Charakterstarke, hamburger Hinterhofatmosphäre bildet die Umgebung, in der ihr euch beim Betreten sofort wohlfühlen werdet.

Unser kreatives Loft, hell und lichtdurchflutet, bietet neben diesem hohen Wohlfühl-Anspruch selbstverständlich auch ein Höchstmaß an Hygiene. Die Mitarbeiter und Künstler stellen euch die notwendige Professionalität zur Verfügung, so dass ihr euch ganz auf eure Wünsche und Vorstellungen einlassen könnt. Ihr erhaltet von uns die künstlerische Umsetzung mit jahrelanger Erfahrung und entsprechender Leidenschaft.

# GO2 SHOP ANDREAS KLATT BODYPIERCING

Durch anatomische Fachkenntnisse, einer langen Berufserfahrung und Fortbildungen in vielen Bereichen, biete ich Dir seit 2003 in meinem Studio ein hohes Maß an Sicherheit, ein ästhetisches Ergebnis und eine ausführliche Beratung.
Modernste Piercingtechniken, ein Goldstandart in der Hygiene, eine hohe Präzision und eine große Schmuckauswahl sind die Grundlagen meiner Arbeit.

# PRODUCT INFORMATION

**EN** To check the *size of the piercing* there are two systems to measure them, Metric and US sizes. The Metric System uses *millimeters* while the US system uses *gauges* and *inches*. As default, we use both throughout the catalog for our clients convenience. For those who are familiar with only one of these systems, please see the conversion charts on the next page.

**PIERCING SIZES**
Piercings are measured by gauge (thickness) and width. Rings are measured by the inside diameter. Straight and curved barbells are measured by the linear width from ball to ball.

**GAUGE**
It is the size of the stem (thickness of the wire) on most pieces of jewelry. Basically, it's the size of the hole people need to insert a piece of jewelry.

**TIP**
0.8 mm and 1.0 mm are used for nose studs and ear piercing. 1.2 mm jewelry is mostly used for eyebrow and labret piercing.
1.6 mm is the size for most piercings , like the tongue or the navel. Larger sizes are used to enlarge holes. This is a gradual process. Ball sizes are a matter of taste but as a general guide, 3 and 4 mm balls are used for eyebrow or labret piercing and 5 and 6 mm balls for tongue piercing. Navel bananas usally have 8 mm ball down and a 5 or 6 mm ball on top.

**DE** Um die *Größe eines Piercings* anzugeben gibt es zwei Systeme, das metrische Einheitensystem und das angloamerikanische Maßsystem. Das metrische System verwendet Millimeter, während das US-System *Gauges* und *Zoll* verwendet. Um es für unsere Kunden zu vereinfachen, verwenden wir beide im Katalog. Für diejenigen, die nur mit einem dieser Systeme vertraut sind, schauen Sie bitte in die Umwandlungstabelle auf der nächsten Seite.

**PIERCING-GRÖSSEN**
Piercings werden gemessen in Stärke und Länge / Breite. Ringe werden am Innendurchmesser gemessen. Gerade und gebogene Stäbe werden linear von Kugel zu Kugel gemessen.

**STÄRKE (GAUGES)**
Das ist die Größe des Stabes (Drahtstärke) bei den meisten Schmuckstücken. Hauptsächlich ist es die Größe des Loches, die man braucht, um ein Schmuckstück einzusetzen.

**TIPP**
0,8 mm und 1,0 mm werden für Nasenstecker und Ohrpiercings verwendet. 1,2-mm-Schmuck wird meist für Augenbrauen und Labret-Piercings verwendet. 1,6 mm ist die Größe für die meisten Piercings, z. B. für Zunge oder Bauchnabel. Größere Größen werden verwendet, um Löcher zu dehnen. Dies ist ein allmählicher Prozess. Kugelgrößen sind eine Frage des Geschmacks, aber allgemein werden 3 mm und 4 mm große Kugeln für Augenbrauen oder Labret-Piercings und 5 mm und 6 mm große Kugeln für Zungenpiercings verwendet. Bauchnabelstecker haben gewöhnlich eine 8-mm-Kugel unten und eine 5 mm oder 6 mm große Kugel oben.

## Länge und Durchmesser
## Length and Diameter

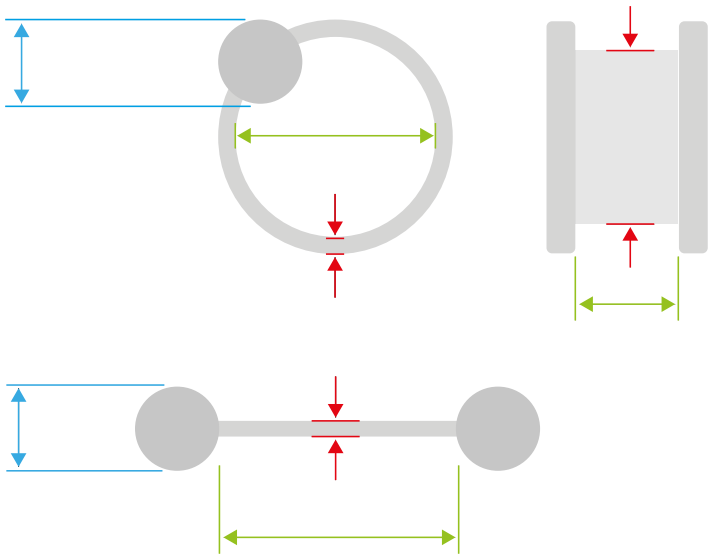

| Millimeter (Metric) | Inches (US) |
|---|---|
| 4.5 mm | 3/16“ |
| 6.0mm | 7/32“ |
| 7.0 mm | 9/32“ |
| 8.0mm | 5/16“ |
| 9.0 mm | 11/32“ |
| 10.0 mm | 13/32“ |
| 11.2 mm | 7/16“ |
| 12.0 mm | 15/32“ |
| 14.0 mm | 9/16“ |
| 15.0 mm | 19/32“ |

| 10.0 mm | 3/8" |
| 12.0 mm | 1/2" |

- Wiresize / Stab- u. Drahtstärke
- Size (length inside) / Größe (Innendurchmesser)
- Ball size / Kugelgröße

# Basic Materials / Basis-Materialien

**Platinum (PT950)**

Platinum is a naturally occurring precious metal known for its exquisite beauty, durability, and versatility. Platinum belongs to the platinum group of metals, which also includes palladium, rhodium, ruthenium, iridium, and osmium. In its purest form, platinum is 95% pure, commonly referred to as “PT950” (meaning 950 parts per thousand are platinum). This high level of purity ensures its exceptional quality and value.

With its unmatched Brilliance and Luster, Platinum possesses a unique, white-silver appearance that distinguishes it from other metals. Platinum’s reflective properties result in a striking, mirror- like luster, capturing and enhancing the brilliance of gemstones and diamonds and unlike White Gold it doesn’t require plating.

One of platinum’s standout features is its exceptional durability. It is highly resistant to corrosion, tarnish, and wear, making it an ideal choice for body jewelry. Unlike other metals, platinum retains its luster and does not fade or change color over time. Platinum is hypoallergenic, making it an excellent choice for individuals with sensitive skin or metal allergies.
Platinum’s limited availability contributes to its desirability and value.

**Prices for Platinum (PT950)**

Raw material prices are fluctuating a lot. Our pricing system will adjust our selling prices based on the daily platinum prices. Our selling prices (prices in the price list) are calculated based on a certain reference price of the raw material. If the price of platinum changes, the selling price will change as well (according to the weight of the material the item contains).

**Platin (PT950)**

Platin ist ein natürlich vorkommendes Edelmetall, das für seine exquisite Schönheit, Haltbarkeit und Vielseitigkeit bekannt ist. Platin gehört zur Platingruppe der Metalle, zu der auch Palladium, Rhodium, Ruthenium, Iridium und Osmium gehören. In seiner reinsten Form hat Platin einen Reinheitsgrad von 95 %, der gemeinhin als „PT950“ bezeichnet wird (950 Teile pro Tausend sind Platin). Dieser hohe Reinheitsgrad gewährleistet seine außergewöhnliche Qualität und seinen Wert.

Mit seiner unübertroffenen Brillanz und seinem Glanz besitzt Platin ein einzigartiges, weiß-silbernes Aussehen, das es von anderen Metallen unterscheidet. Die reflektierenden Eigenschaften von Platin führen zu einem auffallenden, spiegelähnlichen Glanz, der die Brillanz von Edelsteinen und Diamanten einfängt und verstärkt, und im Gegensatz zu Weißgold muss es nicht beschichtet werden.

Eines der herausragenden Merkmale von Platin ist seine außergewöhnliche Haltbarkeit. Es ist äußerst korrosions-, anlauf- und abnutzungsbeständig, was es zu einer idealen Wahl für Körperschmuck macht. Im Gegensatz zu anderen Metallen behält Platin seinen Glanz und verblasst oder verfärbt sich nicht mit der Zeit. Da Platin hypoallergen ist, eignet es sich hervorragend für Personen mit empfindlicher Haut oder Metallallergien.
Die begrenzte Verfügbarkeit von Platin trägt zu seiner Begehrlichkeit und seinem Wert bei.

**Preise für Platin (PT950)**

Die Rohstoffpreise sind stark schwankend.
Unser Preissystem wird unsere Verkaufspreise auf der Grundlage der täglichen Platinpreise anpassen. Unsere Verkaufspreise (siehe Preisliste) werden auf der Grundlage eines bestimmten Referenzpreises des Rohstoffs berechnet. Wenn sich der Platinpreis ändert, ändert sich auch der Verkaufspreis (je nach Gewicht des Materials, das der Artikel enthält).

### 18K Solid Gold

Gold is considered as one of the most precious metals in the world and is appropriate for initial piercings if it is 14k or 18k. Gold higher than 18k is too soft for body jewelry because it can easily be scratched.

G18K- stands for 18 karat (750 Gold). RG stands for 18 karat Rose Gold. WG stands for 18 karat White Gold which is Rhodium plated.

Wherever there is enough surface space, we mark all our Real Gold items with 750 (for 18 karat).

### Prices for 18K Solid Gold

Raw material prices are fluctuating a lot. Our pricing system will adjust our selling prices based on the daily gold prices.

Our selling prices (prices in the price list) are calculated based on a certain reference price of the raw material. If the price of gold changes, the selling price will change as well (according to the weight of the material the item contains).

We mark all our Solid Gold items with 750 (for 18 karat). On small items you might need to use a jeweler loupe to be able to see the tiny laser marking.

### 750er Echtgold

Gold gilt als eines der wertvollsten Metalle der Welt und eignet sich für den Ersteinsatz falls es 14k oder 18k ist. Gold über 18 Karat ist zu weich für Piercings weil es leicht zerkratzt werden kann.

G18K- steht für 18 Karat (750 Gold) Gelbgold. RG steht für 18 Karat (750 Gold) Rose Gold. WG steht für 18 Karat (750 Gold) Weißgold, das rhodiniert ist.

Wo genügend Fläche vorhanden ist, markieren wir all unsere Echt Gold Produkte mit 750 (für 18 Karat).

### Preise für 750er Echtgold

Die Rohstoffpreise sind stark schwankend. Unser Preissystem wird unsere Verkaufspreise auf der Grundlage der täglichen Goldpreise anpassen.

Unsere Verkaufspreise (siehe Preisliste) werden auf der Grundlage eines bestimmten Referenzpreises des Rohstoffs berechnet. Wenn sich der Goldpreis ändert, ändert sich auch der Verkaufspreis (je nach Gewicht des Materials, das der Artikel enthält).

Wir kennzeichnen alle unsere Massivgoldartikel mit 750 (für 18 Karat). Bei kleinen Artikeln müssen Sie möglicherweise eine Juwelierlupe verwenden, um die winzige Lasermarkierung zu erkennen.

### Titanium 6AL-4V-ELI

Titanium is ideal for both initial body piercings and healed piercings as it is compliant with the EU Nickel Directive introduced in Europe in 2001. Because of its virtually 'Nickel Free' content Titanium has become one of the preferred materials used in piercing jewelry within the borders of the European Union.

Grade Ti6AL-4V, ASTM F-136 is the specification for the alloy to be used for surgical implants. Titanium is only half the weight of steel and twice as strong. Titanium can be sterilized in an autoclave.

### Titanium 6AL-4V-ELI

Titan ist ideal für Erstpiercings und verheilte Piercings, da es der 2001 in Europa eingeführten EU-Nickel-Richtlinie entspricht. Aufgrund seines praktisch „nickelfreien" Gehalts ist Titan zu einem der bevorzugten Materialien für Piercing-Schmuck innerhalb der Europäischen Union geworden.

Ti6AL-4V, ASTM F-136, ist die Spezifikation für die Legierung, die für chirurgische Implantate verwendet wird. Titan wiegt nur halb so viel wie Stahl und ist doppelt so stark. Titan kann in einem Autoklaven sterilisiert werden.

### Surgical Steel 316

SS316L is a surgical implant grade, which is the most used material for Body Jewelry. The two most common standards that apply to body jewelry made of steel are ASTM F138 and ISO 5832-1 which describe the qualities of steel for surgical implants. The element in stainless steel that causes allergic reactions in some people is nickel. Polishing the jewelry to a mirror like luster results in a protective layer of chromium oxide, which reduces the release of the Nickel content into the tissue. Surgical Steel can be sterilized in an autoclave.

### Chirurgenstahl 316

SS316L ist ein chirurgischer Implantat-Grad, dieses Material wird am häufigsten für Körperschmuck verwendet. Die zwei häufigsten genutzten Standards für Body Piercing sind ASTM F138 und ISO 5832-1, dieses beschreibt die Qualität des Stahls. Der rostfreie Stahl kann bei Personen allergische Reaktionen hervorrufen, da er Nickel enthält. Das Polieren des Schmuck zu einem Spiegelglanz ist wie eine Schutzschicht aus Chromoxid, die die Freisetzung des Nickel-Gehalts in das Gewebe reduziert. Chirurgenstahl kann in einem Autoklaven sterilisiert werden.

### Nickel Free Cobalt Chromium Alloy

Cobalt Chromium Alloys possess high corrosion resistance and amazing strength.It is very hard to break, bend, deform or even scratch.
At the same time, it has an appealing white color and shine that resembles precious metals like White Gold, Rhodium or Platinum. All this without plating or coating.Even Titanium with it's high image in the Piercing Industry, can't compete in color.
It is widely used in the dental industry and for medical implants like knee and hip joints.
The alloy we use is Nickel, Cadmium and Lead free which makes it REACH compliant.

### Nickelfreie Kobalt-Chrom-Legierung

Kobalt-Chrom-Legierungen weisen eine hohe Korrosionsbeständigkeit und erstaunliche Festigkeit auf und sind nur schwer zu brechen, zu verbiegen, zu verformen oder gar zu zerkratzen.
Gleichzeitig hat es eine ansprechende weiße Farbe und einen Glanz, der an Edelmetalle wie Weißgold, Rhodium oder Platin erinnert. Selbst Titan, das in der Piercing-Industrie ein hohes Ansehen genießt, kann bei der Farbe nicht mithalten.
Es wird häufig in der Dentalindustrie und für medizinische Implantate wie Knie- und Hüftgelenke verwendet.
Die von uns verwendete Legierung ist nickel-, cadmium- und bleifrei und somit REACH-konform.

### PVD Coating

The jewelry is coated in a heated chamber under high vacuum. Electric voltage applied will form a plasma in the chamber and the introduction of various gases produces an ion bombardment. This bombardment atomizes the cathode material (Titanium) into tiny substances which are deposited on the jewelry. The result is a hardened layer, which is biocompatible. It can be autoclaved.

### PVD-Beschichtung

Das Schmuckstück wird in einer beheizten Kammer unter Hochvakuum beschichtet. Durch die angelegte elektrische Spannung bildet sich in der Kammer ein Plasma, und die Einleitung verschiedener Gase erzeugt einen Ionenbeschuss. Durch diesen Beschuss wird das Kathodenmaterial (Titan) in winzige Substanzen zerstäubt, die sich auf dem Schmuckstück ablagern. Das Ergebnis ist eine gehärtete Schicht, die biokompatibel ist. Sie kann autoklaviert werden.

**GOLD PVD**
Shining 18K

**GOLD PVD**
Shining 24K
real gold finish

**ROSE GOLD PVD**
Shining real rose
gold finish

**BLACK PVD**
Shining clear
black finish

### Enamel

Enamel resin, also called „epossodic resin“, has various outstanding properties: It is smooth, hard, chemically resistant, durable, scratch resistant, long-lasting color, easy-to-clean, and connot burn. When it hardens, it creates a smooth, durable coating on metals. Enamel is not paint, so it does not fade with UV light.

### Emaille

Schmelz-Harz, auch genannt „epossidic Harz“ , hat verschiedene herausragende Eigenschaften: Es ist glatt, hart, chemisch widerstandsfähig, langlebig, kratzfest, lang anhaltende Farbe, einfach zu reinigen und kann nicht brennen. Wenn es gehärtet ist, ist es eine glatte dauerhafte Beschichtung auf Metallen. Das Material (Emaille) ist nicht lackiert, somit kann es nicht im UV-Licht verblassen.

### UV Acrylic

Acrylic comes in many shapes and colors. It cannot be sterilized in autoclave and may crack, if soaked in disinfectant chemicals like alcohol or similar.It’s not suitable for initial piercing. The biggest advantage is it’s cheap price.

### UV Acrylic

Acryl gibt es in vielen Formen und Farben. Es kann nicht im Autoklaven sterilisiert werden und kann brechen, wenn es in desinfizierende Chemikalien wie Alkohol oder Ähnliches getaucht wird und ist nicht für das erste Piercing geeignet. Der größte Vorteil ist sein günstiger Preis.

## Bioplast®

Bioplast® is a trademarked medical grade plastic. It was created in 1998 in Austria and is still produced in Tyrol. It was formerly sold under the name of PMFK.
Bioplast® is a Biocompatible Polymer, flexible and can be cut to any length and threaded by any metal ball closure.
Bioplast® adjusts to the body temperature and not to the outside air temperature, like metals. Therefore, people getting pierced with Bioplast®, are less likely to have swellings and infections. The healing process is faster than with any other materials and there are no allergic reactions (no nickel).
Bioplast® can be sterilized by autoclave and is not visible in X-Rays if used on its own without metal attachments.

## Bioplast®

Bioplast® ist ein markenrechtlich geschützter Kunststoff für medizinische Zwecke. Er wurde 1998 in Österreich entwickelt und wird immer noch in Tirol hergestellt. Er wurde früher unter dem Namen PMFK verkauft.
Bioplast® ist ein biokompatibles Polymer, flexibel und kann auf jede beliebige Länge geschnitten und durch jede Metallkugel mit einem Gewinde versehen werden.
Bioplast® passt sich der Körpertemperatur an und nicht, wie Metalle, der Außentemperatur. Daher ist die Wahrscheinlichkeit von Schwellungen und Infektionen bei Menschen, die sich mit Bioplast® piercen lassen, geringer. Der Heilungsprozess ist schneller als bei anderen Materialien und es gibt keine allergischen Reaktionen (kein Nickel).
Bioplast® kann im Autoklaven sterilisiert werden und ist auf Röntgenbildern nicht sichtbar, wenn es allein und ohne Metallaufsätze verwendet wird.

## Organics

Organic body jewelry is made from various natural materials like water buffalo horn, water buffalo bone and different kinds of wood. Organic materials were used historically by many cultures.
Natural materials are not suitable for unhealed piercings or for wear while stretching existing ones. They are sensitive to changes in heat and humidity. Autoclaving, use in saunas or display in showcases exposed to sunlight is therefore not recommended.
Natural materials can absorb oils and sweat from the skin and therefore reduce odors.

## Naturmaterialien

Organischer Körperschmuck wird aus verschiedenen natürlichen Materialien wie Wasserbüffelhorn, Wasserbüffelknochen und verschiedenen Holzarten hergestellt, die in der Vergangenheit von vielen Kulturen verwendet wurden.
Natürliche Materialien eignen sich nicht für nicht verheilte Piercings oder zum Dehnen bestehender Piercings. Sie reagieren empfindlich auf Hitze- und Feuchtigkeitsschwankungen.
Autoklavieren, die Verwendung in Saunen oder das Ausstellen in Vitrinen die dem Sonnenlicht ausgesetzt sind, wird daher nicht empfohlen.
Natürliche Materialien können Öle und Schweiß von der Haut absorbieren und so die Geruchsbildung verringern.

## Freshwater Pearls

Cultured Freshwater Pearls get their name from being cultured in freshwater lake or pond farms, with China and the United States being the main sources.

Nucleation is the surgical procedure to implant a foreign object into the oyster to activate the secretion process. This cultivation period takes years to produce pearls. Generally, 2-7 years in freshwater depending on the host's natural habitat. The longer the process of cultivation, the bigger the pearl size expected.

Slight variation of colour and shape it's a sign of their individuality and naturally occurring. Their unique shapes and wide range of colors combined with their attractive prices and charming character, have made them a favorite among jewelry designers, shoppers and pearl connoisseurs alike.

### How to Care for Cultured Fresh water Pearls

- Wear them often. Pearls love moist environments so wearing them frequently keeps them from drying out.
- After every wear, wipe any build up oil or other substances on pearls with a non abrasive cloth
- If your pearl is visibly stained, wipe it with a soft cloth dipped in a mixture of lukewarm water and mild soap. Do not submerge pearl in water as the collateral material attached to the pearl may not do well with liquid solution
- Never clean pearls with steam or ultrasonic jewelry cleaner as it will likely damage the surface nacre of the pearl

## Süßwasser-Zuchtperlen

Süßwasser-Zuchtperlen verdanken ihren Namen der Tatsache, dass sie in Süßwasserseen oder -teichen gezüchtet werden, wobei China und die Vereinigten Staaten die wichtigsten Herkunftsländer sind.

Bei der Perlenzucht wird ein Fremdkörper in die Auster eingepflanzt, um den Sekretionsprozess zu aktivieren. Diese Kultivierungsphase dauert Jahre, bis Perlen entstehen. In Süßwasser beträgt sie im Allgemeinen 2-7 Jahre, je nach dem natürlichen Lebensraum des Wirts. Je länger der Kultivierungsprozess dauert, desto größer ist die zu erwartende Perlengröße.

Leichte Farb- und Formabweichungen sind ein Zeichen für ihre Individualität und ihr natürliches Vorkommen. Ihre einzigartigen Formen und die breite Farbpalette in Kombination mit ihren attraktiven Preisen und ihrem charmanten Charakter haben sie zu einem Favoriten unter Schmuckdesignern, Käufern und Perlenliebhabern gemacht.

### Pflegehinweise für Süßwasser-Zuchtperlen

- Tragen Sie sie oft. Perlen lieben eine feuchte Umgebung, daher sollten Sie sie häufig tragen, um sie vor dem Austrocknen zu bewahren.
- Wischen Sie die Perlen nach jedem Tragen mit einem nicht scheuernden Tuch von Öl oder anderen Rückständen ab.
- Wenn Ihre Perle sichtbar verschmutzt ist, wischen Sie sie mit einem weichen Tuch ab, das Sie in eine Mischung aus lauwarmem Wasser und milder Seife getaucht haben. Tauchen Sie die Perle nicht in Wasser ein, da das an der Perle haftende Kollateralmaterial möglicherweise nicht gut mit einer Flüssigkeit zurechtkommt.
- Trocknen Sie die Perle gründlich ab, bevor Sie sie in einer flachen, mit Stoff ausgekleideten Hülle aufbewahren, um Kratzer auf der weichen Perlenoberfläche zu vermeiden.
- Reinigen Sie Perlen niemals mit Dampf oder Ultraschallreinigern, da dies die Perlmuttschicht der Perle beschädigen könnte.

## Synthetic Opal

Lab Created Opal (GIA: Polymer Impregnated synthetic opal) is impregnated in the laboratory in around a year and has similar properties as that of natural opal. The main difference with natural opal is that the naturally occurring process has been sped up in the laboratory. Our Lab Created Opal is a beautiful opal with a perfect color dynamicity — revealed the beauty of Precious Opal.
Opal material from the KYOCERA Corporation in Japan is composed of at least 80% Silica and is exhibiting beautiful and vivid opal colors.
This material should not be mistaken with Opal-like plastics sold as imitation or fake Opals. Those materials contains mostly 80 % Resin and only 20 % Silica. Therefore they do not qualify as “Lab Created Opal”

## Synthetischer Opal

Im Labor erzeugter Opal (GIA: Polymerimprägnierter synthetischer Opal) wird im Labor in etwa einem Jahr imprägniert und hat ähnliche Eigenschaften wie natürlicher Opal. Der Hauptunterschied zum natürlichen Opal besteht darin, dass der natürlich vorkommende Prozess im Labor beschleunigt wurde. Unser im Labor erzeugter Opal ist ein wunderschöner Opal mit einer perfekten Farbdynamik – er enthüllt die Schönheit des Edelopals.
Das Opalmaterial der KYOCERA Corporation in Japan besteht zu mindestens 80 % aus Kieselerde und weist schöne und lebhafte Opalfarben auf.
Dieses Material sollte nicht mit opalähnlichen Kunststoffen verwechselt werden, die als Imitation oder Fälschung von Opal verkauft werden. Diese Materialien enthalten meist 80 % Harz und nur 20 % Kieselerde. Daher gelten sie nicht als „im Labor hergestellter Opal“.

## Created Diamonds

Lab created diamonds are 100 % diamonds. The only difference is that the origin is a laboratory and not the earth. ***Created Diamonds*** are identical to mined diamonds possessing the same chemical composition, hardness, brilliance and fire—just as a greenhouse-grown orchid is identical to one found in nature.

**Created Diamonds are a responsible and environmental choice.**

## Künstliche Diamanten

Laborgefertigte Diamanten sind hundertprozentige Diamanten. Der einzige Unterschied besteht darin, dass der Ursprung ein Labor und nicht die Erde ist. ***Created Diamonds*** sind identisch mit abgebauten Diamanten mit der gleichen chemischen Zusammensetzung, Härte, Brillanz und Feuer – so wie eine Orchidee aus dem Gewächshaus einer Orchidee aus der Natur gleicht.

**Künstliche Diamanten sind eine verantwortungsbewusste und umweltfreundliche Wahl.**

CZ

## Cubic Zirconia

**Cubic Zirconia** is currently the most popular substitute to a diamond because to the untrained eye they look identical. Cubic Zirconia or CZ as it is referred to is made from zirconium dioxide a different material than diamonds, which although a different chemical composition comes closer than any other gem to matching the characteristics of a diamond. Natural CZ was first discovered in 1899 but it wasn't until the late 70's that man made CZ first came into production for use in jewellery. CZ on first impression looks just like a diamond but under close inspection there are differences, it has a gravity of between 5.6 and 6.0 which means it's 1.6 times the weight of a diamond. It has a hardness of 8 on the Mohs scale, a refraction index of 2.176 and a dispersive power of 0.060, which means that it's not as hard as a diamond, it's slightly less sparkly but displays more prismatic fire which means more colour sparkles within the gem. Another point to note is that natural diamonds display impurities which CZ doesn't its also clear in colour which most diamonds aren't, but they can be coloured by adding metal oxides in the production process. Unlike diamonds CZ are good thermal insulators which mean they become warm but can't withstand the same kind of heat a diamond can, which is one test that is used to distinguish diamonds from CZ. Caring for CZ is important because they are more brittle than diamonds and susceptible to wear and tear such as chipping and scratches over time.

## Cubic Zirconia

**Cubic Zirkonia** ist derzeit der beliebteste Ersatz für einen Diamanten, weil sie für das ungeschulte Auge identisch aussehen. Cubic Zirkonia oder CZ, wie es genannt wird, wird aus Zirkondioxid hergestellt, einem anderen Material als Diamanten, die zwar eine andere chemische Zusammensetzung haben, die aber näher als jeder andere Edelstein den Eigenschaften eines Diamanten entspricht. Der natürliche CZ wurde erstmals 1899 entdeckt, aber erst in den späten 70er Jahren wurde der von Menschenhand hergestellte CZ erstmals für die Verwendung in Schmuckstücken hergestellt. Der CZ sieht auf den ersten Blick aus wie ein Diamant, aber bei genauer Betrachtung gibt es Unterschiede. Er hat ein Gewicht zwischen 5,6 und 6,0, was bedeutet, dass er 1,6 Mal so schwer ist wie ein Diamant. Er hat eine Härte von 8 auf der Mohsschen Härteskala, einen Brechungsindex von 2,176 und ein Dispersionsvermögen von 0,060, was bedeutet, dass er nicht so hart wie ein Diamant ist, etwas weniger funkelt, aber mehr prismatisches Feuer zeigt, was bedeutet, dass mehr Farbe innerhalb des Edelsteins funkelt. Ein weiterer wichtiger Punkt ist, dass natürliche Diamanten Verunreinigungen aufweisen, was bei CZ nicht der Fall ist. Sie sind auch klar in der Farbe, was bei den meisten Diamanten nicht der Fall ist, aber sie können durch Zugabe von Metalloxiden im Produktionsprozess gefärbt werden. Im Gegensatz zu Diamanten sind CZ gute Wärmeisolatoren, was bedeutet, dass sie zwar warm werden, aber nicht die gleiche Hitze aushalten können wie Diamanten, was ein Test ist, der zur Unterscheidung von Diamanten von CZ verwendet wird. Die Pflege von CZ ist wichtig, weil sie spröder sind als Diamanten und mit der Zeit anfälliger für Abnutzung wie Absplitterungen und Kratzer.

**Premium Zirconia**

The stones we use under this name are perfectly cut and polished Cubic Zirconia. They have all the characteristics of a real diamond with its exceptional cut and sheer brilliance. All stones for our piercings are set by hand and polished by hand. The biggest aspect of the price difference compared to normal zirconia is the additional cutting and polishing effort and machinery used to produce these premium quality zirconias. The more precisely the facets are cut, the better the light reflects.

**Premium Zirkonia**

Die Steine, die wir unter diesem Namen verwenden, sind perfekt geschliffene und polierte Cubic Zirconia. Sie haben alle Eigenschaften eines echten Diamanten mit seinem außergewöhnlichen Schliff und schierer Brillanz. Alle Steine für unsere Piercings werden von Hand gefasst und von Hand poliert. Der größte Aspekt des Preisunterschiedes zu normalem Zirkonia liegt in dem zusätzlichen Schleif- und Polieraufwand und den Maschinen, die verwendet werden, um diese Premium-Qualitätszirkonia herzustellen. Je präziser die Facetten geschliffen sind, desto besser wird das Licht reflektiert.

**Genuine Brazilian Emerald**

Emerald has been synonymous with the color green since ancient times. A fine emerald is a truly breathtaking sight, and this member of the beryl family deserves its placement among the traditional “Big Four” gems along with diamond, ruby, and sapphire. The name comes from the Greek smaragados for „green,“ through the Latin smaragdus to the Middle English esmeralde. The Emeralds we use in our products are from Brazil and are vivid green in color. Emeralds usually have internal fractures, so clean with warm or room temperature soap and water. Avoid wearing a gem where it will get rough treatment. Due to the inclusions within an emerald, it is not wise to clean these gems in an ultrasonic cleaner.

**Echter Brasilianischer Smaragd**

Der Smaragd ist seit der Antike ein Synonym für die Farbe Grün. Ein feiner Smaragd ist ein wahrhaft atemberaubender Anblick, und dieses Mitglied der Beryllfamilie verdient seinen Platz unter den traditionellen „Big Four“ Edelsteinen zusammen mit Diamant, Rubin und Saphir. Der Name stammt vom griechischen smaragados für „grün“, über das lateinische smaragdus zum mittelenglischen esmeralde. Die Smaragde, die wir in unseren Produkten verwenden, stammen aus Brasilien und haben eine leuchtend grüne Farbe. Smaragde weisen in der Regel innere Brüche auf. Reinigen Sie sie daher mit warmem Wasser und Seife auf Zimmertemperatur. Vermeiden Sie es, einen Edelstein an Orten zu tragen, an denen er stark beansprucht wird. Aufgrund der Einschlüsse im Inneren eines Smaragds ist es nicht ratsam, diese Edelsteine in einem Ultraschallreiniger zu reinigen.

**Genuine Amethyst**

Gem lovers have long valued amethyst, the purple variety of quartz, for its deep color and clear crystal. Amethyst receives its purple color from its iron content and natural irradiation under the Earth's surface. Through the ages, amethysts have inspired spiritual symbolism in many societies.

**Echter Amethyst**

Edelsteinliebhaber schätzen den Amethyst, die violette Variante des Quarzes, seit langem wegen seiner tiefen Farbe und seines klaren Kristalls. Seine violette Farbe erhält der Amethyst durch seinen Eisengehalt und die natürliche Bestrahlung unter der Erdoberfläche. Im Laufe der Jahrhunderte haben Amethyste in vielen Gesellschaften eine spirituelle Symbolik inspiriert.

**Genuine Diffusion Sappphire**

Few gems have held our attention over millennia as well as sapphire. The pure blue colors and excellent durability of this gem-quality member of the corundum family make for an exceptional gemstone. However, not all sapphires are blue, it comes in every color of the rainbow. Except red.Long associated with royalty, sapphires are some of the most popular (and expensive) gems in the world.

Diffusion Sapphires: diffusion treatment usually involves applying color to a colorless cut gem by introducing chemical impurities at an atomic scale. Some sapphire gems receive this treatment to improve their color and lower the price for the same appearance.

**Echter Diffusionssaphir**

Nur wenige Edelsteine haben unsere Aufmerksamkeit über Jahrtausende hinweg so sehr auf sich gezogen wie der Saphir. Die reinen blauen Farben und die ausgezeichnete Haltbarkeit dieses Edelsteines aus der Familie der Korunde machen ihn zu einem außergewöhnlichen Edelstein. Aber nicht alle Saphire sind blau, es gibt sie in allen Farben des Regenbogens. Außer rot. Saphire werden seit langem mit Königshäusern in Verbindung gebracht und gehören zu den beliebtesten (und teuersten) Edelsteinen der Welt.

Diffusionssaphire: Bei der Diffusionsbehandlung wird einem farblos geschliffenen Edelstein in der Regel Farbe verliehen, indem chemische Fremdstoffe auf atomarer Ebene hinzugefügt werden. Einige Saphire werden auf diese Weise behandelt, um ihre Farbe zu verbessern und den Preis für dasselbe Aussehen zu senken.

**Genuine Pink Sapphire**

After blue, pink is the most highly valued sapphire color. As Sapphires and also Rubies are simply a variety of Corundum, the pink is the boundary line between rubies and sapphires since pink is commonly considered a light tone of red. It is more common today to call them Pink Sapphires instead of Pink Rubies.

**Echter Rosa Saphir**

Nach blau ist rosa die am meisten geschätzte Saphirfarbe. Da Saphire und auch Rubine eine Variante von Korund sind, bildet Rosa die Grenze zwischen Rubinen und Saphiren, da rosa gemeinhin als ein heller Rotton angesehen wird. Es ist heute üblicher, sie als rosa Saphire und nicht als rosa Rubine zu bezeichnen.

**Genuine Songea Sapphire**

Songea Sapphire: they are named after a location Songea in Tanzania, which is the place of the origin of this gemstone. The sapphires found here are generally in the shades of yellow, orange and red.

**Echter Songea-Saphir**

Songea-Saphir: Sie sind nach dem Ort Songea in Tansania benannt, der der Ursprungsort dieses Edelsteins ist. Die hier gefundenen Saphire sind in der Regel in den Farben Gelb, Orange und Rot gehalten.

**Genuine Citrine**

As the yellow to reddish orange variety of quartz, this gem is available in many sizes and is a durable choice for any jewellery setting. The rise o „earth tone“ fashion have made this readily available gemstone, which has been declared as alternative to topaz, a popular jewellery stone in recent years.

**Echter Citrin**

Als gelbe bis rötlich-orangefarbene Variante des Quarzes ist dieser Edelstein in vielen Größen erhältlich und eine dauerhafte Wahl für jede Schmuckfassung. Die zunehmende Mode der „Erdtöne“ hat diesen leicht verfügbaren Edelstein, welcher zur Alternative zum Topaz erklärt wurde, in den letzten Jahren zu einem beliebten Schmuckstein gemacht.

## Nano Gems

Glass-ceramics is a composite material constituted of nano crystalline particles homogeneously distributed throughout a glass matrix. This combination between amorphous and crystalline states makes a type of material with unique properties.

With its hardness approximating that of a Topaz or Emerald, and special optical properties close to that of a Tourmaline, Nano Gems are ideal for gemstone imitations, eliminating common drawbacks of Crystals. As Cubic Zirconia are perfect for imitating Diamonds, Nano Gems are the best imitations for Color Stones.

## Nano-Edelsteine

Glaskeramik ist ein Verbundwerkstoff, der aus nanokristallinen Partikeln besteht, die gleichmäßig in einer Glasmatrix verteilt sind. Diese Kombination aus amorphem und kristallinem Zustand führt zu einer Art von Material mit einzigartigen Eigenschaften.

Mit einer Härte, die in etwa der eines Topas oder Smaragds entspricht, und besonderen optischen Eigenschaften, die denen eines Turmalins nahe kommen, sind Nano-Edelsteine ideal für Edelsteinimitationen geeignet, da sie die üblichen Nachteile von Kristallen beseitigen.

So wie Cubic Zirconia perfekt zur Imitation von Diamanten geeignet sind, sind Nano Edelsteine die besten Imitationen für Farbsteine. Mit ihren schier endlosen Farb- variationen können sie die Träume eines jeden Designers erfüllen.

# PLATINUM

**EN //** In its purest form, platinum has a purity of 95%, commonly referred to as “PT950” (950 parts per thousand is platinum). This high level of purity ensures its exceptional quality and value. It is highly resistant to corrosion, tarnishing and wear, making it an ideal choice for body jewellery. As platinum is hypoallergenic, it is ideal for people with sensitive skin or metal allergies.

**DE //** In seiner reinsten Form hat Platin einen Reinheitsgrad von 95 %, der gemeinhin als “PT950” bezeichnet wird (950 Teile pro Tausend sind Platin). Dieser hohe Reinheitsgrad gewährleistet seine außergewöhnliche Qualität und seinen Wert. Es ist äußerst korrosions-, anlauf- und abnutzungsbeständig, was es zu einer idealen Wahl für Körperschmuck macht. Da Platin hypoallergen ist, eignet es sich hervorragend für Personen mit empfindlicher Haut oder Metallallergien.

**FR //** Dans sa forme la plus pure, le platine a un degré de pureté de 95 %, communément appelé “PT950” (950 parties pour mille sont du platine). Ce degré de pureté élevé garantit sa qualité et sa valeur exceptionnelles. Il est extrêmement résistant à la corrosion, au ternissement et à l’usure, ce qui en fait un choix idéal pour les bijoux corporels. Le platine étant hypoallergénique, il convient parfaitement aux personnes ayant une peau sensible ou des allergies aux métaux.

**ES //** En su forma más pura, el platino tiene una pureza del 95%, comúnmente denominada “PT950” (950 partes por mil es platino). Este alto grado de pureza garantiza su excepcional calidad y valor. Es muy resistente a la corrosión, el deslustre y el desgaste, lo que lo convierte en una opción ideal para la joyería corporal. Como el platino es hipoalergénico, es ideal para personas con piel sensible o alergias a los metales.

# GOLD

**EN //** Gold is considered as one of the most precious metals in the world and is appropriate for initial piercings if it is 18k. Gold higher than 18k is too soft for body jewelry because it can easily be scratched.
G18K- stands for 18 karat (750 Gold). RG stands for 18 karat Rose Gold. WG stands for 18 karat White Gold which is Rhodium plated.

**DE //** Gold gilt als eines der wertvollsten Metalle der Welt und eignet sich für den Ersteinsatz, wenn es 18k ist. Gold über 18 Karat ist zu weich für Piercings, weil es leicht zerkratzt werden kann.
G18K- steht für 18 Karat (750 Gold) Gelbgold. RG steht für 18 Karat (750 Gold) Rose Gold. WG steht für 18 Karat (750 Gold) Weißgold, das rhodiniert ist.

**FR //** L'or est considéré comme l'un des métaux les plus précieux au monde et convient aux premiers piercings s'il est de 18 carats. L'or supérieur à 18 carats est trop tendre pour les bijoux corporels car il peut être facilement rayé.
G18K- signifie 18 carats (or 750). RG signifie or rose 18 carats. WG signifie or blanc 18 carats, qui est plaqué au rhodium.

**ES //** El oro está considerado como uno de los metales más preciosos del mundo y es apropiado para los piercings iniciales si es de 18k. El oro de más de 18 quilates es demasiado blando para la joyería corporal porque puede rayarse fácilmente.
G18K- significa 18 quilates (oro 750). RG significa oro rosa de 18 quilates. WG significa oro blanco de 18 quilates con baño de rodio.

**No more tiny threads - simply plug in, bend, done.**

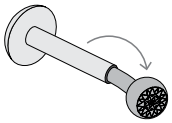

**Keine winzigen Gewinde mehr – einfach stecken, biegen, fertig.**

**1**

Insert the pin about halfway into the casing.

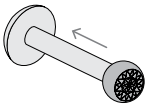

Stecken Sie den Stift ungefähr zur Hälfte in die Hülse.

**2**

Bend the pin slightly by hand as shown. For a tighter fit bend more.

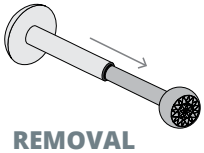

Biegen Sie den Stift wie abgebildet leicht von Hand. Für mehr Halt, biegen Sie etwas stärker.

**3**

Push the removable end all the way into lock.

Drücken Sie das abnehmbare Ende bis zum Anschlag.

**REMOVAL**
**ENTFERNEN**

Pull apart both ends to remove. If the jewelry is too tight, add a slight twisting motion while you pull out the removable end.

Ziehen Sie beide Enden zum Entfernen auseinander. Wenn der Schmuck zu fest sitzt, führen Sie beim Hinausziehen eine leichte Drehbewegung aus.

# TITANIUM

## EN TITANIUM 6AL-4V-ELI

Titanium is ideal for both initial body piercings and healed piercings as it is compliant with the EU Nickel Directive introduced in Europe in 2001. Because of its virtually 'Nickel Free' content Titanium has become one of the preferred materials used in piercing jewelry within the borders of the European Union.
Grade Ti6AL-4V, ASTM F-136 is the specification for the alloy to be used for surgical implants. Titanium is only half the weight of steel and twice as strong. Titanium can be sterilized in an autoclave.

## FR TITANE 6AL-4V-ELI

Le titane est idéal pour les premiers piercings et les piercings cicatrisés, car il est conforme à la directive européenne sur le nickel introduite en Europe en 2001. En raison de son contenu pratiquement exempt de nickel, le titane est devenu l'un des matériaux préférés utilisés dans les bijoux de piercing au sein de l'Union européenne.
La qualité Ti6AL-4V, ASTM F-136 est la spécification de l'alliage à utiliser pour les implants chirurgicaux. Le titane est deux fois moins lourd que l'acier et deux fois plus résistant. Le titane peut être stérilisé dans un autoclave.

## DE TITAN 6AL-4V-ELI (GRAD 23)

Titan ist ideal für Erstpiercings und verheilte Piercings, da es der 2001 in Europa eingeführten EU-Nickel-Richtlinie entspricht. Aufgrund seines praktisch "nickelfreien" Gehalts ist Titan zu einem der bevorzugten Materialien für Piercing-Schmuck innerhalb der Europäischen Union geworden.
Die Spezifikation für die Legierung, die für chirurgische Implantate verwendet wird, lautet Ti6AL-4V, ASTM F-136. Titan ist nur halb so schwer wie Stahl und doppelt so stark. Titan kann in einem Autoklaven sterilisiert werden.

## ES TITANIO 6AL-4V-ELI

El titanio es ideal tanto para los piercings iniciales como para los piercings cicatrizados, ya que cumple la Directiva europea sobre el níquel introducida en Europa en 2001.
Debido a su contenido prácticamente "libre de níquel", el titanio se ha convertido en uno de los materiales preferidos para la joyería de piercing dentro de las fronteras de la Unión Europea.
El grado Ti6AL-4V, ASTM F-136 es la especificación de la aleación que se utiliza para los implantes quirúrgicos. El titanio pesa sólo la mitad que el acero y es dos veces más resistente. El titanio puede esterilizarse en autoclave.

**No more tiny threads - simply plug in, bend, done.**

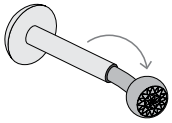

**Keine winzigen Gewinde mehr – einfach stecken, biegen, fertig.**

**1**

Insert the pin about halfway into the casing.

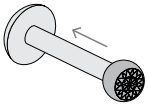

Stecken Sie den Stift ungefähr zur Hälfte in die Hülse.

**2**

Bend the pin slightly by hand as shown. For a tighter fit bend more.

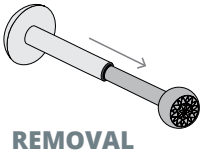

Biegen Sie den Stift wie abgebildet leicht von Hand. Für mehr Halt, biegen Sie etwas stärker.

**3**

Push the removable end all the way into lock.

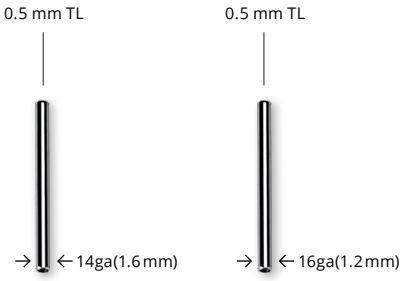

Drücken Sie das abnehmbare Ende bis zum Anschlag.

**REMOVAL**
**ENTFERNEN**

Pull apart both ends to remove. If the jewelry is too tight, add a slight twisting motion while you pull out the removable end.

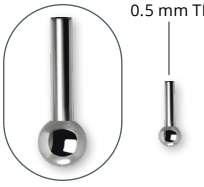

Ziehen Sie beide Enden zum Entfernen auseinander. Wenn der Schmuck zu fest sitzt, führen Sie beim Hinausziehen eine leichte Drehbewegung aus.

# TITANIUM PRE STERILIZED JEWELRY BOX OF 10 PCS

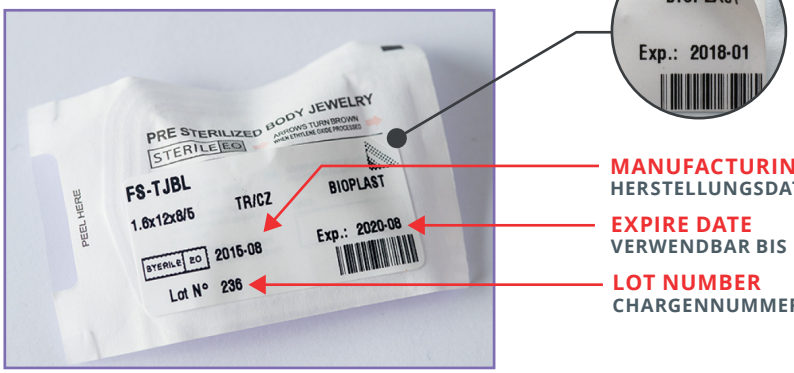

**DE** Komplettprodukte werden zukünftig in einzelnen Teilen verpackt geliefert, damit auch die Gewinde sterilisiert sind.

**EN** In future, complete products will be delivered packed in individual parts so that the threads are also sterilised.

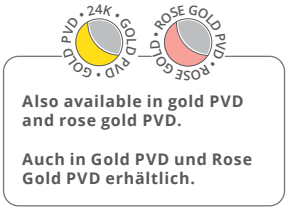

**E.O.** has a high sterility assurance level and penetrates well. The jewelry sterilized with E.O. will stay sterile for 5 years when kept away from light.
It also meets all necessary standards in Europe.

**E.O.** (Ethylenoxid) Gassterilisation E.O. hat eine hohe Sterilitätssicherheit. Der mit E.O. sterilisierte Schmuck bleibt für 5 Jahre steril, wenn er keinem Licht ausgesetzt wird. Er erfüllt alle nötigen Standards in Europa.

**2 LAYERS PEEL-OFF STICKER**

# NICKEL FREE COBALT CHROMIUM ALLOY

## EN NICKEL FREE COBALT CHROMIUM ALLOY

Nickel Free Cobalt Chromium Alloy (CoCr NF) possess high corrosion resistance and amazing strength. lt is very hard to break, bend, deform or even scratch. At the same time, it has appealing white color and shine that resembles precious metals like gold or platinum. It is widely used in the dental industry and for medical implants like knee and hip joints. The alloy we use is Nickel free with a smooth and shiny surface.

## FR L'ALLIAGE DE CHROME-COBALT SANS NICKEL

L'alliage de chrome-cobalt sans nickel (CoCr NF) possède une grande résistance à la corrosion et une force étonnante. Il est très difficile à casser, plier, déformer ou même rayer. En même temps, il a une couleur blanche attrayante et une brillance qui ressemble à celle des métaux précieux comme l'or ou le platine. Il est largement utilisé dans l'industrie dentaire et pour les implants médicaux comme les articulations des genoux et des hanches. L'alliage que nous utilisons est exempt de nickel et sa surface est lisse et brillante.

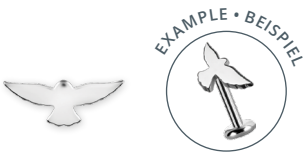

## DE NICKELFREIE KOBALT-CHROM-LEGIERUNG

Die nickelfreie Kobalt-Chrom-Legierung (CoCr NF) besitzt eine hohe Korrosionsbeständigkeit und erstaunliche Festigkeit. Sie ist sehr schwer zu brechen, zu biegen, zu verformen oder sogar zu zerkratzen. Gleichzeitig hat es eine ansprechende weiße Farbe und einen Glanz, der an Edelmetalle wie Gold oder Platin erinnert. Diese Legierung wird häufig in der Dentalindustrie und für medizinische Implantate wie Knie- und Hüftgelenke verwendet. Die von uns verwendete Legierung ist nickelfrei und hat eine glatte und glänzende Oberfläche.

## ES ALEACIÓN DE CROMO-COBALTO SIN NÍQUEL

La aleación de cromo-cobalto sin níquel (CoCr NF) posee una alta resistencia a la corrosión y una fuerza sorprendente. Es muy difícil de romper, doblar, deformar o incluso rayar. Al mismo tiempo, tiene un atractivo color blanco y un brillo que se asemeja a los metales preciosos como el oro o el platino. Se utiliza ampliamente en la industria dental y para implantes médicos como las articulaciones de la rodilla y la cadera. La aleación que usamos es libre de níquel con una superficie lisa y brillante.

**No more tiny threads - simply plug in, bend, done.**

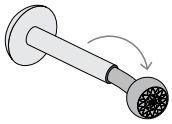

**Keine winzigen Gewinde mehr – einfach stecken, biegen, fertig.**

**1**

Insert the pin about halfway into the casing.

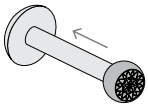

Stecken Sie den Stift ungefähr zur Hälfte in die Hülse.

**2**

Bend the pin slightly by hand as shown. For a tighter fit bend more.

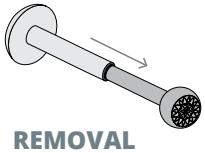

Biegen Sie den Stift wie abgebildet leicht von Hand. Für mehr Halt, biegen Sie etwas stärker.

**3**

Push the removable end all the way into lock.

Drücken Sie das abnehmbare Ende bis zum Anschlag.

**REMOVAL**
**ENTFERNEN**

Pull apart both ends to remove. If the jewelry is too tight, add a slight twisting motion while you pull out the removable end.

Ziehen Sie beide Enden zum Entfernen auseinander. Wenn der Schmuck zu fest sitzt, führen Sie beim Hinausziehen eine leichte Drehbewegung aus.

# SURGICAL STEEL

## EN SURGICAL STEEL 316L

SS316L is a surgical implant grade, which is the most used meterial for Body Jewelry. Due to the EU Nickel Directive introduced in Europe in 2001, steel is only recommened for healed piercings (releaseing less than 0.5ug/cm²/week).

## DE CHIRURGENSTAHL 316L

SS316L ist ein chirurgischer Implantat-Grad, welches das am häufigsten verwendete Material für Körperschmuck ist. Aufgrund der EU-Nickel-Richtlinie die 2001 in Europa eingeführt wurde, wird Stahl nur empfohlen für verheilte Piercings (Freisetzung von weniger als 0,5ug/cm2/Woche).

## FR ACIER CHIRURGICAL 316L

L'acier chirurgical (SS316L) est le matériel le plus fréquemment utilisé pour les piercings. Du à la directive Européenne introduite en Europe en 2001, l'acier chirurgical n'est recommandé que pour l'utilisation des piercings cicatrisés (diffusion de moins de 0.5ug/cm²/semaine).

## ES QUIRURGUICO 316L

SS316L Es un implante de gradoquirúrgico, el cual, es el mas usado para material de Body piercing. Debido a la Normativa EU de Níquel introducida en Europa en el 2001, el acero esta recomendado solo para piercings curados (perdiendo menos de 0.5 micras por cm² a la semana).

# SURGICAL STEEL 24K REAL GOLD PVD

## EN 24K REAL GOLD PVD

Gold PVD (Physical Vapour Deposition) coating is applied onto SS316L body jewelry. The jewelry is coated in a heated chamber under high vacuum. Electric voltage applied will form a plasma in the chamber and the introduction of various gases produces an ion bomb
jewelry. The result is a hardened layer, which is biocompatible. It can be autoclaved.

## FR PLACAGE OR PVD 24 CARATS

Les bijoux en acier chirurgical sont plaqués de couleur doré à l'aide du système PVD (Physical Vapour Disposition-Dépôt physique par vapeur). Les bijoux sont placés dans une chambre chauffée sous vide. La tension électrique appliquée va former un plasma dans la chambre et l'introduction de différents gaz produit un bombardement ionique. Ce bombardement atomise le matériau de cathode (or 24 carats réel) en substances minuscules qui sont déposés sur les bijoux. Le résultat est une couche durcie, qui est biocompatible et peut être stérilisé en autoclave.

## DE 24 KARAT PVD-GOLDBESCHICHTUNG

Gold PVD (Physical Vapour Deposition) ist eine dünne, abriebfeste Beschichtung auf SS316L Piercings. Der Schmuck wird in einer erhitzten Kammer im Hochvakuum beschichtet. Elektrische Spannung hilft ein Plasma in der Kammer zu bilden, und die Einführung von verschiedenen Gasen erzeugt einen Ionenbeschuss. Dieses Bombardement zerstäubt das Kathodenmaterial (24 karat Echtgold) in winzige Substanzen, die auf dem Schmuck abgelegt werden. Das Ergebnis ist eine gehärtete Schicht, die biokompatibel ist. Es kann autoklaviert werden.

## ES PLACCATURA IN ORO PVD A 24 CARATI

El recubrimiento de oro PVD (Physical Vapour Deposition) sobre la joya SS316L. La joyería se cubre con diversos gases que producen una concentración de iones que se depositan en la joyería. El resultado es una capa endurecida que recubre las piezas y es biocompatible. Apto para esterilizar en autocable.

# SILICON & ACRYLIC

## EN UV ACRYLIC

Acrylic comes in many shapes and colors. It cannot be sterilized in autoclave and may crack, if soaked in disinfectant chemicals like alcohol or similar.It's not suitable for initial piercing.

## DE UV ACRYLIC

Acryl gibt es in vielen Formen und Farben. Es kann nicht im Autoklaven sterilisiert werden und kann brechen, wenn es in desinfizierende Chemikalien wie Alkohol oder Ähnliches getaucht wird und ist nicht für das erste Piercing geeignet.

## FR UV ACRYLIQUE

L'acrylique existe dans de nombreuses formes et couleurs. Il ne peut pas être stérilisé en autoclave et peut se fissurer s'il est trempé dans des produits chimiques désinfectants tels que l'alcool ou des produits similaires.

## ES UV ACRILICO

El acrílico tiene muchas formas y colores. No se puede esterilizar en autoclave y puede agrietarse, si se empapa en productos químicos desinfectantes como el alcohol o similar.No es adecuado para la perforación inicial.

Die gängigsten Materialien, aus denen Einweghandschuhe hergestellt werden, sind Naturlatex, Nitril oder Vinyl. Einweg-Schutzhandschuhe sind üblicherweise in den Größen XS bis XXL erhältlich und für die linke wie die rechte Hand passend. Für spezielle Anwendungen gibt es extralange Handschuhe. Einweg-Dentalhandschuhe und Einweg-OP-Handschuhe werden auch in mehreren Größen angeboten und sind anatomisch geformt, d. h. passende Handschuhe für die linke und die rechte Hand.

Bei den Einweghandschuhen unterscheidet man zwischen unsterilen und sterilen Handschuhen. Unsterile Handschuhe werden für hygienische Anforderungen oder den persönlichen Schutz benutzt, während die sterilen Handschuhe in Kliniken oder Labors eingesetzt werden, wo die Kontamination von Patienten oder Materialien vermieden werden muss.

Einweghandschuhe gibt es mit den verschiedensten Texturen, von glatt über geraute Fingerspitzen oder Handflächen bis hin zu komplett gerauten Oberflächen. Sie sind in den unterschiedlichsten Farben erhältlich, je nach Anwendungsbereich oder Geschmack des Anwenders.

Man bekommt Einweghandschuhe entweder gepudert oder puderfrei. Gepuderte Handschuhe haben den Vorteil, dass sie sich mühelos überstreifen lassen, was gerade bei schwitzenden Händen von Vorteil ist. Andererseits erhöht das Puder jedoch das Allergierisiko, da die Puderpartikel allergene Substanzen enthalten, die über die Atemwege absorbiert werden können. Gemäß DIN EN 455 ist die Verwendung gepuderter Latexhandschuhe im Medizinsektor nicht zulässig. Alternativ kommen Nitrilhandschuhe oder innenbeschichtete Latexhandschuhe zum Einsatz.

Die puderfreien Handschuhe sind hautverträglicher und sie enthalten weniger Latexproteine. Durch doppelte Chlorinierung kann der Proteingehalt nochmals auf einen nicht mehr messbaren Bereich reduziert werden.

Einweghandschuhe können zusätzlich mit verschiedenen Stoffen außen wie innen versehen werden, z. B. Polymerbeschichtung oder Lanolin und Vitamin E. Im Folgenden werden die Vor- und Nachteile der einzelnen Typen beschrieben.

## ÜBERSICHT DER PRODUKTIONSVERFAHREN BEI DER HERSTELLUNG VON LATEX- UND NITRILHANDSCHUHEN

| | **Puder** | **Offline-Chlorinierung** | **Online-Chlorinierung** | **Polymerbeschichtung** |
|---|---|---|---|---|
| **Art Beschichtung** | Maschinell | Manuell | Maschinell | Maschinell |
| **Verfahren** | Einseitige Anbringung von Puder | Beidseitige Chlorinierung, anschließende mehrfache Waschung innen und außen | Einseitige Chlorinierung, anschließende Waschung | Ein- bzw. zweiseitige Beschichtung mit Polymeren |
| **Verbreitung** | Nur noch bei Spezialanwendungen | Erste Wahl, wo Qualität zählt | Häufigstes Verfahren | Relativ neues Verfahren |
| **Vorteile** | Kosten | Qualität und Komfort, Reduktion Allergie-Risiko | niedrige Herstellkosten, niedrigerer Materialbedarf | Qualität (Lebensdauer, Farbe) Griffigkeit |
| **Nachteile** | Hohes Allergierisiko | Hohe Herstellkosten, hoher Anteil an Handarbeit, höherer Materialbedarf | Qualität, Außenseite des Handschuhs bleibt unbehandelt, Restrisiko Latexallergie | Hohe Herstellkosten, hoher Anteil an Handarbeit |

## LATEXHANDSCHUHE

Latex ist ein Naturprodukt, das aus Kautschukbäumen gewonnen wird. Es zeichnet sich durch seine Kompostierbarkeit als ausgesprochen umweltfreundlich aus. Latexhandschuhe werden in Medizin, Industrie, Handel, Laboren und Privathaushalten eingesetzt. Latexmaterial ist sehr elastisch, extrem reißfest und beständig gegen zahlreiche Laugen und Säuren. Vor dem Umgang mit Chemikalien sollte der Anwender die Beständigkeitsliste gegen Chemikalien zurate ziehen.

Für den Umgang mit Lösungsmitteln und Ölen eignet sich dieser Handschuhtyp allerdings aufgrund seiner Durchlässigkeit nicht.

Latexhandschuhe bieten erstklassigen Tragekomfort bei ausgezeichnetem Tastempfinden. Einweghandschuhe aus Latex werden in zahlreichen Stärken und Größen hergestellt. Sie bieten traditionell die beste Passform und das beste Tragegefühl.

Der Nachteil von Naturlatex besteht darin, dass die Proteine eine Latexallergie auslösen können.

## NITRILHANDSCHUHE

Einweg-Nitrilhandschuhe, auch als Synthetik- Latex bezeichnet, werden aus Nitril-Butadien-Kautschuk (NBR) hergestellt. Sie werden als Alternative zu Latexhandschuhen verwendet, da sie keine Latexproteine enthalten und somit auch keine Allergien auslösen können.

Durch seine glatte Innenfläche lässt sich der puderfreie Nitrilhandschuh problemlos an- und ausziehen.

Ein weiterer Vorteil ist die erweiterte Chemikalienresistenz des Nitrilhandschuhs (Kontaktzeiten und Mittel beachten). Auch die Durchstichfestigkeit liegt über der eines Latex-
handschuhs.

Der Einweg-Nitrilhandschuh ist im medizinischen Bereich, in Laboren und in der Lebensmittelindustrie einsetzbar.

*Von Anwender zu Anwender gibt es unterschiedliche Wahrnehmungen der verschiedenen Materialien. Die Tabelle auf der nächsten Seite gibt einen groben Überblick über die verschiedenen Materialeigenschaften, der Ihnen hilft, den richtigen Handschuh für jede Anwendung zu finden.*

*Kautschukmasse*

| **Latexproteine** | vorhanden | nicht vorhanden |
| **Vulkanisationsbeschleuniger *** | vorhanden | vorhanden |
| **Weichmacher** | nicht vorhanden | nicht vorhanden |
| **Kompostierbar** | 😀 | ☹ |

*** Der Vulkanisationsprozess ist der wesentliche Schritt bei der Handschuhproduktion, der Natur- und Synthetiklatex elastisch macht. Die Kautschuk-Molekülketten werden unter Einfluss von Wärme mithilfe von Schwefel vernetzt. Vulkanisationsbeschleuniger steigern Elastizität, Widerstandskraft und Haltbarkeit der Handschuhe.**

Das Produkt ist konform gemäß EU-Verordnung 2017/745.

CE 0321 Die Nummer gibt die benannte Stelle wieder, die die Konformitätsbewertung vorgenommen hat.

Nur zum Einmalgebrauch

LATEX Der Handschuh besteht aus Naturlatex.

EN 374 Der Handschuh ist eine effektive mikrobiologische Barriere entsprechend EN 374.

## PRONTOLIND SOLUTION
**20 ML**

### PERFECT FOR ANY PIERCING

Prontolind Solution is a ready-to-use, aqueous solution for antiseptic cleansing and moistening of fresh and problem piercings.

Areas of the skin, mucous membranes and jewellery that are hard to reach can be cleaned.

## PRONTOLIND TROPFLÖSUNG
**20 ML**

### PERFEKT FÜR JEDEN STICHKANAL

Prontolind Tropflösung kann alternativ zum Piercing Spray genutzt werden und eignet sich hervorragend zur Reinigung von Piercings.

In Kombination mit fusselfreien Wattestäbchen und Vlies- oder Mullkompressen. Optimaler antimikrobieller Schutz!

## PRONTOLIND MOUTHSPRAY
75 ml

Prontolind Mouthspray – antibacterial care for all oral piercings. The Polyhexanide-Betaine Complex in ProntoLind Mouthspray cares and cleans without any pathogenic ingredients, like chlorhexidine, sugar or alcohol and is also ideal to be used on the go. Optimal hygiene and fresh breath in a practical pocket size!

## PRONTOLIND MUNDSPRAY
75 ml

Mit dem Mundspray im Taschenformat ist Prontolind immer mit dabei. Die antibakterielle Pflege für Oralpiercings fördert die Wundheilung und beugt Entzündungen vor. Mit dem frischen Mentholgeschmack sorgt das Mundspray zudem für die angenehme Erfrischung zwischendurch. Auch das Mundspray ist besonders schonend, denn es enthält weder Alkohol noch Zucker.

## PRONTOLIND MUNDSPÜLLÖSUNG
250 ml

Für alle Piercings im Oralbereich, auch für die tägliche Zahnpflege bestens geeignet! Die Prontolind Mundspüllösung fördert die Abheilung nach Zungen- und Lippenpiercings. So pflegt und reinigt die Mundspüllösung ganz ohne belastende Inhaltsstoffe wie Chlorhexidin, Zucker oder Alkohol. Zusätzlich minimiert die Mundspüllösung die Entstehung von Biofilmen – die ideale Brutstätte für Keime und Bakterien. Im Vergleich zu anderen Mundspüllösungen sind keine Nebenwirkungen, wie z. B. Geschmacksirritationen, Veränderungen der Schleimhäute oder Gelbfärbung der Zähne zu erwarten. Der gleiche Wirkstoffkomplex wird auch sehr erfolgreich im Dentalbereich für die tägliche Mundhygiene eingesetzt.

**The kit contains**

1. 50 ml of saline solution
2. 50 ml of antibacterial solution

### Das OTZI Piercing Duo-Set ist ein Set für die tägliche Reinigung und Vorbeugung von Infektionen.

Diese Heilmethode wurde in Zusammenarbeit mit medizinischen Fachkräften entwickelt, um einen optimalen Heilungsprozess zu ermöglichen und das Infektionsrisiko zu begrenzen

**Das Set enthält**

1. 50 ml Kochsalzlösung
2. 50 ml antibakterielle Lösung

## ANTI-BACTERIAL SOLUTION
50 ml

**CONDITIONING**
20 sprays per box

**VERPACKUNGSEINHEIT**
20 Sprays in einer Box

**Intended for piercing disinfection, the antibacterial solution is designed to act quickly and effectively on a large number of bacteria.**

It is used as a preventive measure, and helps to sanitize the skin and jewelry when the latter is changed.

An antibacterial solution should not be used excessively (more than 2 times a day) or for prolonged periods. Too frequent use can lead to skin reactions such as redness or itching. For prolonged use, consider OTZI Gentle Cleansing Gel.

**HOW TO USE?**

1. Make sure your piercing is clean and dry
2. Spray a little OTZI antibacterial solution on your piercing and let it dry without rinsing.

*Product in conformity with the new Biocide regulation registered with the BAuA N-61171.*

**Did you know?**
The application of alcohol at 70° or 90° is to be proscribed on a piercing. On the other hand, an antibacterial solution with a very low alcohol content is very effective because the alcohol contained in the solution increases the bactericidal activity of the antiseptic (CHLORHEXIDINE).

**Die antibakterielle Lösung ist für die Desinfektion von Piercings bestimmt und wirkt schnell und wirksam gegen eine große Anzahl von Bakterien.**

Sie wird als vorbeugende Maßnahme verwendet und hilft, die Haut und den Schmuck zu desinfizieren, wenn letzterer gewechselt wird.

Eine antibakterielle Lösung sollte nicht übermäßig (mehr als 2 Mal pro Tag) oder über längere Zeiträume verwendet werden. Eine zu häufige Anwendung kann zu Hautreaktionen wie Rötungen oder Juckreiz führen. Für eine längere Anwendung empfiehlt sich das OTZI Gentle Cleansing Gel.

**WIE WIRD ES VERWENDET?**

1. Stellen Sie sicher, dass Ihr Piercing sauber und trocken ist
2. Sprühen Sie ein wenig OTZI antibakterielle Lösung auf Ihr Piercing und lassen Sie es trocknen, ohne es abzuspülen.

*Das Produkt stimmt mit der neuen Biozid-Verordnung überein und ist mit der BAuA Registriernummer N-61171 registriert.*

**WUSSTEST DU DAS?**
Man sollte  das Anwenden von 70° oder 90° Alkohol bei einem Piercing vermeiden. Jedoch ist ein niedriger Alkohol wie in der hygienische Lösung (1%) sehr wirksam, auf Grund der antiseptisch bakterizide Aktivität (Chlorexidin).

*CPNP notification (new2013 regulation) n°2339738*

*CPNP Benachrichtigung (new2013 Verordnung) n°2339738*

## CLEANSING FOAM
50 ml

**CONDITIONING**
20 sprays per box

**VERPACKUNGSEINHEIT**
20 Sprays in einer Box

### For daily piercing cleaning.

Its formula, adjusted to the skin's PH level, respects the balance of cutaneous flora and enables frequent, effective cleaning of piercings.

**HOW TO USE IT?**

1. Wash hands thoroughly with water and cleansing foam.
2. Apply a small amount of cleansing foam to a compress.
3. Gently clean the piercing, taking care to remove all scabs and residues around the piercing.
4. Rinse with lukewarm water and dry with a compress.

**DID YOU KNOW THAT?**
It is very important to clean the piercing before using an antibacterial solution. This step is called detersion and it is essential. Indeed, the antibacterial action will be more effective on a clean and dry skin.

### Für die tägliche Reinigung von Piercings.

Seine auf den PH-Wert der Haut abgestimmte Formel respektiert das Gleichgewicht der Hautflora und ermöglicht eine häufige und wirksame Reinigung der Piercings.

**WIE WIRD ES VERWENDET?**

1. Die Hände gründlich mit Wasser und Reinigungsschaum waschen.
2. Eine kleine Menge des Reinigungsschaums auf eine Kompresse auftragen.
3. Reinigen Sie das Piercing sanft, wobei Sie darauf achten, dass Sie alle Krusten und Rückstände rund um das Piercing entfernen.
4. Mit lauwarmem Wasser abspülen und mit einer Kompresse abtrocknen.

**WUSSTEN SIE DAS?**
Es ist sehr wichtig, das Piercing zu reinigen, bevor Sie eine antibakterielle Lösung verwenden. Diesen Schritt nennt man Detersion, und er ist unerlässlich. Die antibakterielle Wirkung ist nämlich auf einer sauberen und trockenen Haut besser.

*CPNP notification*
*(new 2013 regulation) n°1396289*

## SALINE SOLUTION
50 ml

**CONDITIONING**
20 sprays per box

**VERPACKUNGSEINHEIT**
20 Sprays in einer Box

**Intended for daily rinsing, the saline solution optimizes piercing hydration.**

Thanks to its special diffuser, it is sprayed in the form of micro-particles, offering greater efficacy than single-dose units.

**HOW TO USE IT?**

1. Wash hands thoroughly with water and OTZI cleansing gel.
2. Spray the saline solution onto a compress, rinse the piercing and gently move the jewel.
3. Gently wipe the piercing with a new compress.

**Die Kochsalzlösung ist für die tägliche Spülung vorgesehen und optimiert die Hydratation des Piercings.**

**WIE WIRD ES VERWENDET?**

1. Die Hände gründlich mit Wasser und OTZI-Reinigungsgel wasche
2. Sprühen Sie die Kochsalzlösung auf eine Kompresse, spülen Sie das Piercing ab und bewegen Sie das Schmuckstück vorsichtig.
3. Das Piercing mit einer neuen Kompresse sanft abwischen.

## MOUTHWASH SOLUTION

**Designed for oral hygiene, OTZI Piercing mouthwash is ideal for maintaining mouth piercings.**

It contains essential oil of clove, which is renowned for its benefits in oral hygiene. Its specific formula cleanses the mouth without altering the natural balance of oral flora.

**HOW TO USE IT?**
1. Brush teeth thoroughly before each mouthwash.
2. Using the measuring cap, dilute 1 part mouthwash solution with 3 parts water..
3. Rinse vigorously for at least 30 seconds. Do not swallow.

**DID YOU KNOW THAT?**
The clove tree is native to the Moluccan Islands in the Indonesian archipelago.

**WHAT ARE THE BENEFITS OF CLOVES?**
As an essential oil, clove has long been recognized as an anti-inflammatory.
It is also said to have antiseptic properties, and was previously used as a local anesthetic. It has been used for thousands of years in Asia to relieve dental pain (wisdom teeth, for example).
Cloves derive all their benefits from their high concentration of the aromatic compound eugenol. Its properties also make it an excellent ally in the fight against certain viral infections.

**Die Mundspülung OTZI Piercing wurde für die Mundhygiene entwickelt und ist ideal für die Pflege von Mundpiercings.**

Es enthält ätherisches Nelkenöl, das für seine Vorteile bei der Mundhygiene bekannt ist. Seine spezifische Formel reinigt den Mund, ohne das natürliche Gleichgewicht der Mundflora zu verändern.

**WIE IST ES ZU VERWENDEN?**
1. Vor jeder Mundspülung die Zähne gründlich putzen.
2. Mit Hilfe der Messkappe 1 Teil Mundspüllösung mit 3 Teilen Wasser verdünnen.
3. Führen Sie eine energische Mundreinigung für mindestens 30 Sekunden durch.

**WUSSTEN SIE DAS?**
Der Nelkenbaum ist auf den Molukken im indonesischen Archipel heimisch.

**WAS SIND DIE VORTEILE DER GEWÜRZNELKE?**
Als ätherisches Öl ist die Gewürznelke seit langem als entzündungshemmend bekannt.
Ihr werden auch antiseptische Eigenschaften nachgesagt, und sie wurde früher als Lokalanästhetikum verwendet. In Asien wird sie seit Tausenden von Jahren zur Linderung von Zahnschmerzen (z. B. bei Weisheitszähnen) verwendet.
Die Gewürznelke verdankt ihre Wirkung dem hohen Gehalt an der aromatischen Verbindung Eugenol. Ihre Eigenschaften machen sie auch zu einem ausgezeichneten Verbündeten im Kampf gegen bestimmte virale Infektionen.

500 ml to dilute

Thanks to its new 500ml format, the Easypiercing mouthcare is ideal for professional usage.It is very effective for cleaning the mouth piercing, it assures a perfect hygiene.

500 ml zum Verdünnen

Dank der neuen 500ml-Größe, ist die Mundpflege Easypiercing ideal für den professionellen Einsatz. Sie ist sehr effektiv für die Reinigung vor dem piercen im Mundbereich, da eine perfekte Hygiene gewährleistet ist.

### Second Skin

«Second-skin» type polyurethane Protective Film, hypoallergenic and waterproof to be applied after tattooing. Transparent and highly elastic, its application on all body parts is quick and simple.

OTZI Easytattoo Protect provides daily comfort to the tattooed person, reduces friction and risks of infection. Allows the skin to breathe and stay in a humid environment. The tattooed person gets peace of mind for the first 12 to 24 hours.

**Quality Insurance:** Made in a laboratory according to the EN ISO 13485 norm.

**Shelf life:** 3 years

### Die zweite Haut

Die „zweite Haut“ ist ein hypoallergener, wasserdichter Polyurethan-Folienverband, der nach dem Tätowieren angewandt werden kann. Dieser ist transparent und hochelastisch, somit ist die Anwendung an allen Körperstellen schnell und einfach.

OTZI Easytattoo Protect bietet einen hohen Tragekomfort, reduziert Reibungen am Tattoo und das Risiko einer Infektion. Dennoch ermöglicht es der Haut zu atmen und die Hautfeuchtigkeit beizubehalten.
Somit bietet der Folienverband der tätowierten Haut Erholung für die ersten 12 bis 24 Stunden.

**Qualitätssicherung:** Hergestellt in einem Labor gemäß der Norm EN ISO 13485.

**Haltbarkeit:** 3 Jahre

## TATTOO CARE KIT

**The OTZI kit is the first all-in-one skincare solution designed specifically to optimize tattoo care and hydration.
Cleanses, moisturizes and regenerates your tattoo.**

**DID YOU KNOW THAT?**

The ALPHA BISABOLOL contained in the tattoo cream is an active ingredient coming from a tree of Brazil. It is adapted to all types of skins by its soothing, regenerating and softening properties.

**Das OTZI-Kit ist die erste All-in-One-Hautpflegelösung, die speziell für die optimale Pflege und Feuchtigkeitsversorgung von Tattoos entwickelt wurde.
Reinigt, befeuchtet und regeneriert Ihr Tattoo.**

**WUSSTEN SIE DAS?**

Das in der Tattoo-Creme enthaltene ALPHA BISABOLOL ist ein Wirkstoff, der aus einem brasilianischen Baum stammt. Er eignet sich für alle Hauttypen durch seine beruhigenden, regenerierenden und weichmachenden Eigenschaften.

**CONDITIONING**

## SOFT CLEANSING GEL
OTZI Easytattoo

**CONDITIONING**
30 bottles per box

**VERPACKUNGSEINHEIT**
30 Flaschen in einer Box

**Intended for the daily cleaning of the tattoo, OTZI soft cleansing gel is hypoallergenic and moisturizing.**

The formula is adjusted to the skin pH and has an emollient effect reducing the itching caused by the tattoo. It respects the cutaneous flora, protecting the tattoo and allowing a frequent wash.

**HOW TO USE?**

1. Start by cleaning your hands with water and OTZI soft cleansing gel.
2. Apply a bit of OTZI soft cleansing gel onto your tattoo.
   Clean it delicately, do not scratch.
3. Rinse with lukewarm water and wipe by dabbing with a clean and dry towel.

**Did you know?** It is important to correctly clean the tattoo before applying a moisturizing cream. For a maximum effectiveness, the moisturizing cream must be applied on a clean and dry skin. Especially the first few days, it is important to remove the lymph and ink from the skin with a perfectly suitable product. The tattoo will be brighter and the colours bolder.... This is why we strongly suggest using OTZI soft cleansing gel before OTZI tattoo cream.

**OTZI sanftes Reinigungsgel ist vorgesehen für die tägliche Reinigung der Tätowierung. Das Reinigungsgel ist hypoallergen und feuchtigkeitsspendend.**

Die Formel ist auf den pH-Wert der Haut eingestellt und hat einen Weichmacher-Effekt, es verringert  den Juckreiz der durch die Tätowierung verursacht wird. Es achtet die Hautflora, schützt die Tätowierung somit auch bei häufigem waschen.

**ANWENDUNG!**

1. Beginnen Sie mit der Reinigung der Hände mit Wasser und OTZI sanftem Reinigungsgel.
2. Geben Sie ein bisschen sanftes OTZI Reinigungsgel auf Ihr Tattoo.
   Reinigen Sie es vorsichtig, ohne zu kratzen.
3. Spülen Sie es mit lauwarmem Wasser ab und tupfen das Tattoo mit einem sauberen Handtuch trocken.

**Wussten Sie schon?** Es ist wichtig, die Tätowierung richtig zu reinigen, bevor Sie eine Feuchtigkeitscreme auftragen. Für eine maximale Wirksamkeit, muss die  Feuchtigkeitscreme auf eine saubere und trockene Haut aufgetragen werden. Insbesondere in den ersten paar Tagen, ist es wichtig, die Lymphflüssigkeit und Tinte von der Haut, mit einem perfekt passenden Produkt zu entfernen. Die Tätowierung wird intensiver und die Farben kräftiger sein .... Deshalb empfehlen wir dringend, erst das sanfte OTZI Reinigungsgel vor der OTZI Tattoo-Creme zu benutzen.

50 ml 30 Flaschen in einer Box
100 ml 30 Flaschen in einer Box

**Specially developed for tattoo care, Tattoo Cream moisturizes and helps restructure the skin barrier.**

It reduces tattoo-related itching sensations. Dermatologically tested, it offers excellent skin tolerance. Non-sticky and non-staining.

**HOW TO USE IT?**
1. Start by cleaning your tattoo with OTZI cleansing gel, rinse with lukewarm water and pat dry with a clean cloth.
2. Apply the tattoo cream, massaging gently until completely absorbed.
3. Reapply 3-4 times a day for 10 days.

**DID YOU KNOW THAT?**
The shea butter contained in OTZI cream is very rich in active ingredients: fatty acids, vitamins A, D, E... . Incredibly moisturizing, it soothes, protects and deeply nourishes the skin. Its combination of precious ingredients also helps maintain skin elasticity by stimulating collagen production. Its exceptional content of unsaponifiables gives it an emollient action, favoring the penetration of active ingredients.
Applying a large quantity of cream will not produce optimum results. On the other hand, the mechanical action of massage will encourage the cream to penetrate properly, thus restructuring the cutaneous

**Die speziell für die Tattoo-Pflege entwickelte Tattoo-Creme spendet Feuchtigkeit und hilft, die Hautbarriere wieder aufzubauen.**

Sie reduziert den Juckreiz bei Tätowierungen. Dermatologisch getestet, bietet sie eine ausgezeichnete Hautverträglichkeit. Nicht klebend und nicht färbend.

**WIE WIRD SIE ANGEWENDET?**
1. Reinigen Sie Ihr Tattoo zunächst mit OTZI-Reinigungsgel, spülen Sie es mit lauwarmem Wasser ab und tupfen Sie es mit einem sauberen Tuch trocken.
2. Tragen Sie die Tattoo-Creme auf und massieren Sie sie sanft ein, bis sie vollständig eingezogen ist.
3. Tragen Sie die Creme 10 Tage lang 3-4 Mal pro Tag auf.

**WUSSTEN SIE DAS SCHON?**
Die in der OTZI-Creme enthaltene Sheabutter ist sehr reich an aktiven Inhaltsstoffen: Fettsäuren, Vitamine A, D, E... . Unglaublich feuchtigkeitsspendend, beruhigt, schützt und nährt sie die Haut tief. Die Kombination wertvoller Inhaltsstoffe hilft außerdem, die Elastizität der Haut zu erhalten, indem sie die Kollagenproduktion anregt. Ihr außergewöhnlicher Gehalt an unverseifbaren Stoffen verleiht ihr eine erweichende Wirkung, die das Eindringen der Wirkstoffe begünstigt.
Das Auftragen einer großen Menge der Creme führt nicht zu optimalen Ergebnissen. Die mechanische Wirkung der Massage hingegen fördert das richtige Eindringen der Creme und damit die Wiederherstellung der Hautbarriere.
